Trans. of Institut Chistykh Khimicheskikh Reaktivov.

DESCRIPTORS: *Laboratory equipment, *Fractionation,
*Distilling plants.

When components are fractionated of close boiling
points, reflux formation in a hypothermal condenser
depends exclusively upon the amount of liquid in the
latter and is independent of the amount of vapor
entering the condenser per unit time. The dependence
of the reflux formation upon the amount of liquid in the
condenser is a linear function. (Author)
